

ABOUT MEDICI

Our mission is to restore each patient's optimal quality of life. Where possible, we diagnose the underlying cause of chronic pain and treat that directly.

We utilize a variety of minimally invasive, integrative, interventional therapies to alleviate the pain while minimizing pharmacological dependence. A personal treatment plan may include:

- Injection procedures such as facet-joint injections, selective nerve root blocks, steroid and trigger-point injections
- Hormone Replacement Therapy
- Hyperbaric Oxygen Therapy
- Physical Therapy
- Surgery, including Spinal Cord Stimulators and Vertiflex
- Intrathecal pumps, percutaneous discectomy, nucleoplasty, and radio-frequency ablation

TREATMENT PHILOSOPHY

- Provide the least invasive procedure providing the optimal outcome
- Treat the root problem, not mask the effects
- Use medications sparingly to avoid pharmacological dependence
- Utilize regenerative medicine where indicated
- Manage the total scope of patient's wellness and care

**We Accept
Most Insurance
Including Medicare**

CLINICS
